## 24 Tornado Takes Its Toll on Church Services

### Nansulate coating for building energy efficiency

Nansulate Energy Protect clear thermal insulation and mold resistance coating insulates and reduces energy use in an easy to apply, environmentally friendly liquid coating. The product by Industrial Nanotech, Inc. is designed to increase thermal resistance of windows, walls, ceilings, and skylights of commercial buildings and facilities.

This nanotechnology-based coating is non-toxic, low odor, and low voc, and is easily applied with standard paint sprayers, roller, or brush. Insulates surfaces while also protecting them from mold growth, moisture, and UV light. Indoor or outdoor use the company said. *For more information circle 232 on the Reader Service Page.*

### Rolyn expands contents restoration capabilities

Rolyn Companies, Inc. announces the launch of its new contents restoration division. In conjunction with the expansion, Rolyn hired industry veteran Norris Gearhart to manage the day to day operations of the department.

"Homeowners and businesses often assume that much of the furniture, documents, and belongings damaged during a fire or flood is beyond repair. But today most items can be fully restored with careful handling and the right technologies and techniques. Restoring critical contents first, such as critical legal or financial documents or hotel guest room furniture, can significantly reduce business disruption," Gearhart said. *For more information circle 231 on the Reader Service Page.*

### Blades designed for safety, efficiency

"If you or anyone you know have ever cut into anything behind drywall or plaster board, then here is a product to prevent future disasters," the company said. Saf-T-Kut drywall blades are designed for and fit most commercial reciprocating saws.

The small orange blades have a serrated edge rather than teeth which cuts down drywall dust dramatically, making straight, fast, and safe drywall cuts. Two blades per pack, with an average lifespan of approximately 300-500 linear feet. *For more information circle 243 on the Reader Service Page.*
